AutoCAD (left) vs. FreeCAD (right) AutoCAD is available for use on Windows, macOS, and Linux platforms. The application is published by Autodesk and is available for purchase as a licensed product, as freeware, and as a version that can be used without a license, for both home and commercial use. While the commercial version of AutoCAD is available for purchase, FreeCAD is also a fully-featured free version of AutoCAD. Note: While many of the terms used in this article also apply to other CAD applications, Autodesk AutoCAD and FreeCAD are specifically discussed. Autodesk AutoCAD and FreeCAD are cross-platform (OS-agnostic), open source CAD software, meaning that they are available for Windows, macOS, and Linux as source code, and they are published in the open source repository of the Linux operating system, the GNU General Public License (GPL). Additionally, you can use AutoCAD and FreeCAD to make other types of 3D files, including 3D solids, 3D models (CAM and OBJ), and STL files. The two CAD applications that are discussed in this article use OpenGL to render 3D graphics. For AutoCAD, the development process is an open source/Open Content project, meaning that anyone can participate. For FreeCAD, development is handled by a small group of volunteers working at the Autodesk STEAM center. In an effort to help the FOSS community understand Autodesk AutoCAD, we will use the terms AutoCAD and FreeCAD

Icons AutoCAD includes a library of icons. These icons can be accessed by the "Get Customized Icons" command. The library includes icons of most common file types and products, as well as some other custom icons. These icons can be viewed and customized by the "Get Customized Icons" command. In 2010, the company introduced a new icon library called the Design Icons. This is an icon library for visualization and implementation of design ideas. It includes a set of visualizations and tools to explore design in AutoCAD and other programs. Macros Macros are short pieces of AutoLISP code that can be saved as a project and run, and run on a number of layers. They can be used to create custom commands and functions. The macros can be saved as separate files or included in the project file. They can be run by using the "Run Custom Macros" command. AutoCAD has several macro commands to facilitate custom functions and a standard set of macro commands. Miscellaneous features AutoCAD also includes a number of miscellaneous features. These include: The Quick Command tool which allows users to save a series of steps as a macro and then run them at the push of a button. Custom Functions: save functions as an AutoLISP file that can be loaded into a project or template. AutoLISP programming environment: allows users to create, edit, and debug macros. Ripple and XRP Live Well Together Ever since its founding in 2012, Ripple has primarily operated under a firm belief in bringing financial markets to people. The company has been successful in doing this by designing and building payment methods that can be used for remittances and cross-border payments, while minimizing or eliminating transaction costs. Just in time for 2018, Ripple is also expanding its horizons by making use of its solid position to enter the world of blockchain. After achieving cross-border payments through its xCurrent product in early 2016, Ripple realized the potential of blockchain technology and decided to enter the world of decentralized ledgers. As a result, the company implemented its XRP cryptocurrency into the RippleNet (Ripple's RippleConnect-based blockchain). RippleNet has proven to be a huge success so far, given that it has seen over 50 institutions, representing more than $110 billion of the total transactions value, use RippleNet for cross-border and on-demand payments. That said, the Ripple team has bigger plans for the future of the RippleNet. The Ripple team believes that the XRP ledger could be used to track and record most transactions in the world economy. As a result, the RippleNet could be expanded to serve not only banks, but also other financial institutions that could use blockchain technology to effectively manage their finances. While Ripple is currently at the forefront of blockchain, it is essential that the company never loses sight of its core mission. The company must continue to design innovative products that will enable banks and other financial institutions to take advantage of the power of the blockchain. Ripple and XRP Live Well Together As the XRP ledger will undoubtedly be used by banks and financial institutions to run their entire operations, there is a strong possibility that Ripple could benefit from the partnership. For starters, XRP will provide a convenient way for banks to use the blockchain. As Ripple is currently one of the few companies that understands how to utilize the blockchain, the firm has a firm understanding of how to use XRP. A perfect example of how Ripple could benefit from
